About Me

"Passionate about creating software products and services that address user needs and prioritize ease of use."

Experience

TheGigabit | Frontend Developer   **2025 Jan - Present**

- Revamped and developed TheGigabit's official website using Next.js, creating a modern, responsive, and high-performing user experience across all devices.
- Collaborated with the marketing team to define the content architecture, SEO strategy, and keyword-optimized copy, improving visibility and engagement.
- Delivered a visually appealing and cohesive web design that strengthened TheGigabit's brand identity and professional image.
- Built a CMS with Next.js, Prisma ORM, and PostgreSQL, enabling administrators to efficiently manage and publish blog content.

Lenovo PCCW Solutions | Software Engineer   **2023 May - 2024 Dec**

- Developed a Claim Management System using ReactJS to streamline submission and approval workflows.
- Designed high-fidelity UI prototypes for website projects using Figma, ensuring alignment with user requirements.
- Conducted usability testing with real users to evaluate and enhance the system's user experience.

Jabil Sdn Bhd | MLOps Intern   **2022 Sep - 2023 Jan**

- Developed a python Optical Character Recognition (OCR) program to extract information from invoices.
- Documented projects and AWS research findings using Azure DevOps Wiki.
- Collaborated with data scientists to develop Machine Learning DevOps pipeline.
